

Case Study

Traditional School Buildings

The buildings of this school in Wellington Street, Long Eaton are typical of many older Junior Schools in the state sector.

Case Study

Traditional School Buildings

Built in 1911, the solid walls and high ceilings represent challenges for installations of new building services.

The Problem

School management at Long Eaton wanted to address their need for lockdown safety and required a distinctive alarm. The school needed to ensure that a lockdown alarm would be heard and recognised instantly, enabling students to follow lockdown procedures as fast as possible.

The Solution

A Lifebell III system was provided and installed by Anchor Sound & Security Ltd and gave the school a simple and manageable solution which used the school's data network, thus avoiding extensive intrusive cabling works. If one of the call points is pressed, an audible voice alert is raised site-wide which can be reset by a handset control. The system also gives staff the ability to communicate with persons located by the activated call point and a PA function for dynamic control of an extended lockdown event.

Total Project Cost

£9,770.00

Project Location

Long Eaton, Nottingham, UK

System Installed

Lifebell III
